

Last night you couldn't see the sun. But it didn't move away. *You* did. Your place on Earth turned away from the sun. Now it is day, and your place on Earth is turned toward the sun.

Earth keeps turning all the time. One turn takes a full day, twenty-four hours. This brings night and day, again and again, to you.

- 1 At night you can't see the  
a sun.  
b moon.  
c earth.
- 2 At night your place on Earth  
a faces the sun.  
b turns away from the sun.  
c is not moving.
- 3 In the day your place on Earth  
a hides from the sun.  
b is not moving.  
c turns toward the sun.
- 4 Earth turns  
a during the night.  
b during the day.  
c all the time.
- 5 One turn takes  
a twelve hours.  
b twenty-four hours.
